

DWA_04.3 Knowledge Check_DWA4

1. Select three rules from the Airbnb Style Guide that you find **useful** and explain why.

- 2.1 Use const for all of your references; avoid using var: This ensures that you can't reassign your references, which can lead to bugs and difficult to comprehend code.
 - 5.1 Use object destructuring when accessing and using multiple properties of an object: Repeating object access creates more repetitive code, requires more reading, and creates more opportunities for mistakes
 - 10.1 Always use modules (import/export) over a non-standard module system. You can always transpile to your preferred module system: Makes more sense, easier to read, all in one place.
-

2. Select three rules from the Airbnb Style Guide that you find **confusing** and explain why.

- 6.1 Use single quotes ' for strings: Any reason why double quotes are worse? Or just preference, if using Airbnb style and one uses double quotes how bad is it?
- 7.3 Never declare a function in a non-function block (if, while, etc). Assign the function to a variable instead: understanding of a non-function block (if statement) does this not make it more efficient depending on use case?
- 7.11 Spacing in a function signature, given:

```
// good
const x = function () {}
const y = function a() {}
```

Is the 'a' param in the correct position?
